

TRACK SYSTEM

Mod Track Connectors & Accessories

The fittings that let a Mod track run grow and finish cleanly. Straight connectors join two rails into one continuous line and carry power across the joint; left- and right-facing feed connectors bring power in at an end or mid-span to suit the room and the nearest source; and end caps finish the run. All lock in flush with the same twist-lock fittings as the rest of the Mod system, keeping a low profile in Black or White so nothing shows but the light.
