

TRACK SYSTEM

# Mod Track Rail & Power Feed

The backbone of a Mod track layout. The slim aluminum Recessed Rail runs a clean straight line across the ceiling and carries heads anywhere along its length — they snap in and slide freely end to end — while the compact Power Feed ties the run into house wiring at a single J-box and drives up to 200 watts of low-voltage LED across the whole line. Add rail lengths with a Mod connector to cover a longer run, in Black or White to disappear into the ceiling.

FINISH OPTIONS
