Monolith Bollards

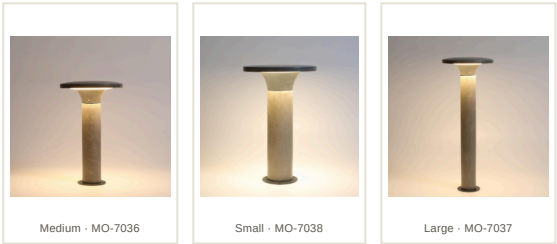

Tall, monolithic concrete columns give the Monolith Bollards a sculptural, architectural presence along a path, drive, or garden edge. Each casts warm, low-glare light downward at ground level, guiding steps without washing out the night sky above. The solid, cast-concrete build shrugs off rain, sun, and freeze-thaw seasons for years of use outdoors, and a simple low-voltage run sets them up in a row for a runway effect — durable landscape lighting that makes a large yard feel beautiful and safe past sunset.
